Continuation of 5. does NOT place the application in condition for allowance because: Applicant argued that prior art did not disclose a sensor coupled to the bus and the first electronic component to sense events in the first electronic component. As to applicant's argument Nouri disclosed an exemplary message from the micro controller network table includes "temperature sensor # 5 exceeding warning threshold" (col. 22, lines 33-37). One ordinary skill in the art at the time of the invention has the knowledge that first electronic component contains micro controller where bus and sensors are the components of the micro controller. The above Nouri's disclosure can be interrupted as a sensor coupled to the bus and the first electronic component to sense events in the first electronic component..
